

Naved Ansari

Naved Ansari received an M. Eng in Computer Engineering from Boston University in May 2016. He is currently working with the HIL and BMI team. He's passionate about cloud computing, high performance computing and embedded systems.

Sahil Tikale

I am a Computer Engineering PhD student researcher working at MOC. My advisor is Prof. Orran Krieger. I am one of the core developers of HIL and also work on projects: BMI & SecureCloud. I have a masters degree from Nanyang Technological University and 8 years of industry experience working in India and Singapore.

I am broadly interested in cloud scale systems design with focus on bare-metal clouds. My focus is on developing novel methods to share bare-metal resources with end-users securely in a way that is as flexible as traditional clouds without the overhead of virtualization.
